| | 7'-0" | 8'-0" | 12 | 4 | 7'-0" | GX-300 | 0'-8" | 2'-8" | 4'-8" | 6'-0" | | | | | | |
| | 7'-8" | 8'-8" | 13 | 4 | 8'-0" | GX-300 | 0'-8" | 2'-8" | 4'-8" | 6'-8" | | | | | | |
| | 9'-0" | 10'-0" | 15 | 5 | 8'-6" | GX-300 | 0'-8" | 2'-0" | 4'-0" | 6'-0" | 8'-0" | | | | | |
| | 11'-0" | 12'-0" | 18 | 6 | 10'-0" | GX-300 | 0'-8" | 2'-0" | 4'-0" | 6'-0" | 8'-0" | 10'-0" | | | | |

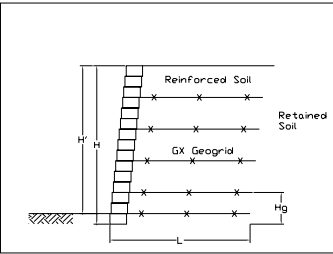

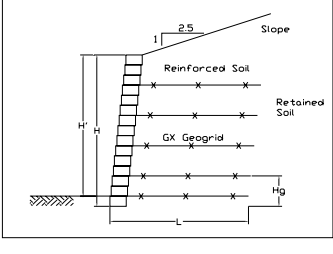

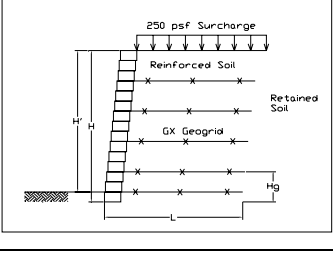

Notes:

- The above design chart is for preliminary estimates only. In all cases, the final design for construction should be performed by a qualified professional engineer using site specific soil conditions.
- Definitions:
 H' = Exposed wall height
 H = Total wall height
 Hg = Elevation of geogrid placement measured from the bottom of the segmental retaining wall
 L = Length of geogrid measured from the front face of the Versa-Lok Square Foot retaining wall units.
- This design chart has been prepared exclusively for Versa-Lok Square Foot retaining wall units and GX Geogrid based upon the assumptions indicated above.

- Minimum design factors of safety are based on NCMA's Design Manual for Segmental Retaining Walls, 2nd Edition. This design chart does **NOT** include the effects of global stability.
- The GX geogrid must be extended from the front face of the Versa-Lok Square Foot retaining wall units.
- This design chart assumes no hydrostatic loading of the reinforced wall fill and that adequate drainage has been provided both during and after construction.
- This design chart was developed specifically for use with GX Geogrid manufactured by Carthage Mills and Versa-Lok Square Foot segmental retaining wall units marketed by Versa-Lok. The facing connection strength data used in the development of this design chart is not suitable for other segmental retaining wall units.
