

# C CAP

## NOTCHED CAP INSTALLATION GUIDE

### INSTALLATION:

The notched C Cap is a small detail that can make your finished job look more polished and professional.

This cut can be made on all the C Caps that start on a step down. This is where the cap meets the wall block on each course with a change in height. (See the illustration below)

Typically the dimensions of the cut-out should mimic the overhang of the cap, anywhere from 1" to 2".
