## About Get Real Stone®

Get Real Stone<sup>®</sup> is a brand of quality natural stone products mined in the mountains of North Carolina and surrounding regions. As the name implies, our stone is 100% real.

Our diversified line of products includes our signature Architectural Series™ thin stone veneer, made available to the public through an ever-expanding network of dealers throughout the US. Our partners share our commitment to a high level of quality control and customer service.

#### **DISCLAIMER**

Photos shown herein depict general colors and textures only. As with any natural building material, color and texture may vary considerably.

(†) Denotes stones that contain a high concentration of iron and may oxidize over time if exposed to the elements. In cases where these products are used for exterior projects, sealing the stone may help reduce or prevent the effect.

Get Real Stone® & its affiliates assume no liability in cases where these guidelines have not been followed. Get Real Stone® & its affiliates assume no liability for installed materials. Get Real Stone® & its affiliates assume no liability for typographical errors in this catalog or any other marketing materials produced by, or on behalf of, Get Real Stone®.

# Stone Glossary & Nomenclature

<u>Veneer</u> - Decorative stone applied to the surface of vertical walls. The term refers to the material applied as well as to the process of covering the wall. Many of our veneer stones are available in varying bed depths (thickness) as described below:

<u>Thin Veneer</u> - Stone veneer with a bed depth (thickness) ranging from 1" to 1 1/2". Our Architectural Series™ thin veneer meets the weight specifications of the Uniform Building Code (15 Lbs/SqFt or less).

**Medium Veneer** - Stone veneer with a bed depth (thickness) ranging from 2" to 4".

**Full-Bed Veneer** - Stone veneer with a bed depth (thickness) ranging from 3" to 5". Full-bed veneer typically requires an additional footing to support the weight of the stone facade.

**<u>Bed Face</u>** - A face on a stone formed by a natural seam in the rock along the planes of stratification.

<u>Split Face</u> - A face on a stone running perpendicular to the bed face. This face usually reveals the stratification of the rock.

Facade - The finished face of a vertical wall.

**Bed Depth (Thickness)** - The dimension of a stone, when laid as a facade, from the visible face of the stone to the opposing parallel face (I.E.: front to back).

Rise (Height) - The vertical dimension of a stone when laid as a facade.

**Length** - The horizontal dimension of a stone when laid as a facade.

<u>Visible Face</u> - The surface of stone that is easily visible when looking at a completed veneer installation.

**Mosaic** - Stone that is generally irregular in shape with no definite pattern.

Random Ashlar - Stone that has been manually cut, or dressed, into roughly square and/or rectangular shapes.

**Ledgestone (or Ledge)** - Stone that is typically greater in length than in rise (height).
